

## Datacenter Services

A Smartronix Health IT Service Offering

**Mission:** Provide a complete suite of services and support to enable organizations to meet presidentially mandated Federal datacenter consolidation initiatives.

Downward pressure on Federal agency spending will continue as part of deficit reduction efforts. Bureau-specific, agency component-specific, and program-specific datacenter footprints with increasing space allocations, energy costs, and real estate costs will need to be scaled down due to budget and energy mandates. With 'in-house' solutions needed to meet performance and/or security requirements, agencies must maximize department-wide services, interagency sharing, co-location, and virtualization technologies.

### A Joint Team Focus - Your Agency & Smartronix

Smartronix has the in-depth knowledge and expertise and will partner with your organization to:

- >>> **Reduce the costs** of datacenter hardware, software, and operations through consolidated support, virtualization technologies, licensing opportunities, and shared management/monitoring tools
- >>> **Promote green IT** through reduction of the overall datacenter footprint and lowered energy consumption
- >>> **Increase the overall security** posture of your organization through governance and standards
- >>> **Improve performance** through enhanced systems management, interoperability, reliability, and availability allowing your agency's IT budget and strategy to shift focus back to the core business of medicine and patient care

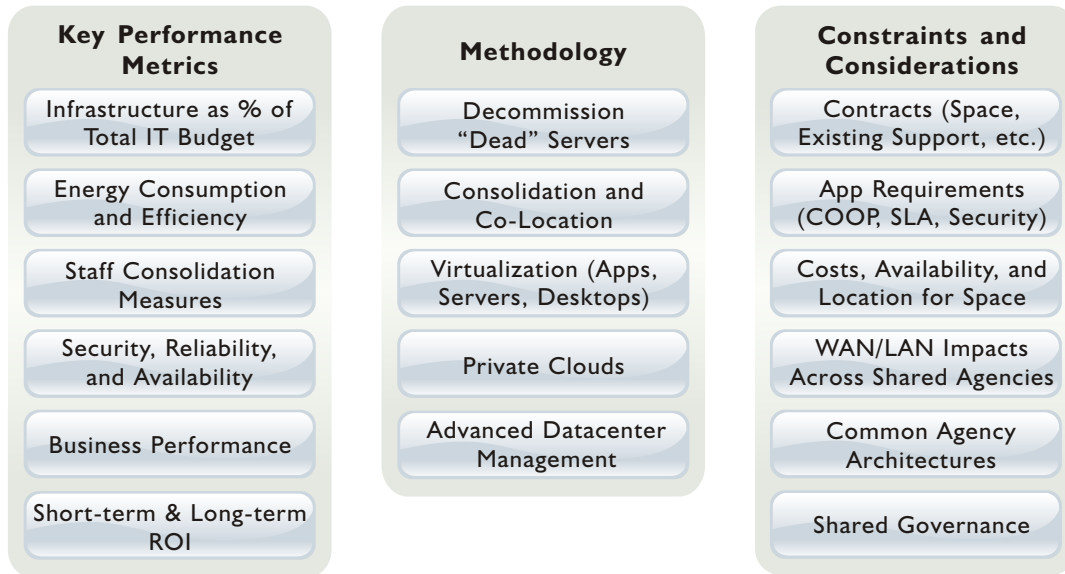

### "We Get It" - Understanding and Addressing the Problems

Smartronix is acutely aware of the nation's constantly evolving medical information landscape and the need for a flexible and reliable, yet lean, secure IT service delivery environment. To ensure delivery within budget, your organization must consider consolidation to lower IT spending. Smartronix provides services that support various methodologies - from decommissioning dead servers, to advanced virtualization strategies. We facilitate your planning and strategy development by evaluating various considerations and constraints pertinent to your organizational situation. To help justify and highlight the benefits gained from consolidation, we help define Key Performance Indicators (KPIs) and provide the data to track them.

*From startup to decommission, we ensure your network is secure, stable, and resilient.*

## Constraint – Consideration Model *Tailored to Your Situation*
